Question 2.3 Is a surface water drainage charge payable?

Records confirm that a surface water drainage charge is payable for the property.

Informative	Where surface water from a property does not drain to the public sewerage system no surface water drainage charges are payable. Where surface water charges are payable but upon inspection the property owner believes that surface water does not drain to the public sewerage system, application can be made to the water company to end surface water charges.
-------------	--

Question 2.4 Does the public sewer map indicate any public sewer, disposal main or lateral drain within the boundaries of the property?

The public sewer map indicates that there are no public sewers, disposal mains or lateral drains within the boundaries of the property. However it has not always been a requirement for such public sewers, disposal mains or lateral drains to be recorded on the public sewer map. It is therefore possible for unidentified sewers, disposal mains or lateral drains to exist within the boundaries of the property.

Informative	The boundary of the property has been determined by reference to the Ordnance Survey record. The presence of a public sewer running within the boundary of the property may restrict further development. United Utilities Ltd has a statutory right of access to carry out work on its assets, subject to notice. This may result in employees of the company or its contractors needing to enter the property to carry out work.
-------------	---

Question 2.4.1 Does the public sewer map indicate any public pumping station or any other ancillary apparatus within the boundaries of the property?

The public sewer map included indicates that there is no public pumping station or other ancillary apparatus within the boundaries of the property. However, from 1st October 2016 private pumping stations which serve more than one property will be transferred into public ownership but may not be recorded on the public sewer map until that time.

Informative	The approximate boundary of the property has been determined by reference to the Ordnance Survey record or the map supplied. The presence of a pumping station within the boundary of the property may restrict further development within it. The sewerage undertaker (United Utilities Ltd) has a statutory right of access to carry out work on their assets, subject to notice. This may result in employees of United Utilities Ltd or its contractors needing to enter the property to carry out work. From 1 October 2016 sewerage undertaker (United Utilities Ltd) will be responsible for private pumping stations: - serve a single property, and are outside the property boundary or - serves two or more properties It should be noted that only private pumping stations installed before 1 July 2011 will be transferred into the ownership of United Utilities Ltd.
-------------	--

Question 2.5 Does the public sewer map indicate any public sewer within 30.48 metres (100 feet) of any buildings within the property?

The public sewer map included indicates that there is a public sewer within 30.48 metres (100 feet) of a building within the property.

Informative	The presence of a public sewer within 30.48 metres (100 feet) of the building(s) within the property can result in the local authority requiring a property to be connected to the public sewer. The measurement is estimated from the Ordnance Survey record, between the building(s) within the boundary of the property and the nearest public sewer. Sewers indicated on the extract of the public sewer map as being subject to an agreement under section 104 of the Water Industry Act 1991 are not an 'as constructed' record. It is recommended that these details are checked with the developer.
-------------	---

Question 2.5.1 Does the public sewer map indicate any public pumping station or any other ancillary apparatus within 50 metres of any buildings within the property?

The public sewer map included indicates that there is no public pumping station or other ancillary apparatus within 50 metres of any buildings within the property. However, from 1st October 2016 private pumping stations which serve more than one property will be transferred into public ownership but may not be recorded on the public sewer map until that time.

Informative	Private pumping stations installed before 1 July 2011 will be transferred into the ownership of United Utilities Ltd. The presence of a public pumping station within 50 metres of the building(s) within the property can result in the local authority requiring a property to be connected to the public sewer. The measurement is estimated from the Ordnance Survey record, between the building(s) within the boundary of the property and the nearest public sewer. Any private sewers or lateral drains which are indicated on the extract of the public sewer map as being subject to an agreement under Section 104 of the Water Industry Act 1991 are not an 'as constructed' record. It is recommended these details be checked with the developer.
-------------	---

Question 2.6 Are any sewers or lateral drains serving or which are proposed to serve the property the subject of an existing adoption agreement or an application for such an agreement?

The property is part of an established development and is not subject to an adoption agreement.

Informative	This enquiry is of interest to purchasers of new homes who will want to know whether or not the property will be linked to a public sewer. Where the property is part of a very recent or ongoing development and the sewers are not the subject of an adoption application, buyers should consult with the developer to ascertain the extent of private drains and sewers for which they will hold maintenance and renewal liabilities.
-------------	--

Question 2.7 Has a sewerage undertaker approved or been consulted about any plans to erect a building or extension on the property over or in the vicinity of a public sewer, disposal main or drain.

There are no records in relation to any approval or consultation about plans to erect a building or extension on the property over or in the vicinity of a public sewer, disposal main or drain. However, the sewage undertaker might not be aware of a building or extension on the property over or in the vicinity of a public sewer, disposal main or drain.

Informative	Buildings or extensions erected over a sewer in contravention of building controls may have to be removed or altered
-------------	--

Question 2.8 Is the dwelling-house which is or forms part of the property at risk of internal flooding due to overloaded public sewers?

United Utilities have confirmed they do not hold a record of any properties being at risk of internal flooding due to overloaded public sewers within their supply area. From the 1st October 2011 private sewers, disposal mains and lateral drains were transferred into public ownership it is therefore possible that a property may be at risk of internal flooding due to an overloaded public sewer which the sewerage undertaker is not aware of. For further information it is recommended that enquiries are made of the vendor.

Informative	<p>A sewer is "overloaded" when the flow from a storm is unable to pass through it due to a permanent problem (e.g. flat gradient, small diameter). Flooding as a result of temporary problems such as blockages, siltation, collapses and equipment or operational failures are excluded. "Internal flooding" from public sewers is defined as flooding which enters a building or passes below a suspended floor. For reporting purposes, buildings are restricted to those normally occupied and used for residential, public, commercial, business or industrial purposes.</p> <p>"At Risk" properties are those that United Utilities Ltd is required to include in the Regulatory Register that is reported annually to the Director General of Water Services. These are defined as properties that have suffered or are likely to suffer internal flooding from public foul, combined or surface water sewers due to overloading of the sewerage system more frequently than the relevant reference period (either once or twice in ten years) as determined by United Utilities Ltd's reporting procedure.</p> <p>Flooding as a result of storm events proven to be exceptional and beyond the reference period of one in ten years are not included on the at Risk register.</p> <p>Properties may be at risk of flooding but not included on the Register where flooding incidents have not been reported to United Utilities Ltd.</p> <p>Public Sewers are defined as those for which United Utilities Ltd holds statutory responsibility under the Water Industry Act 1991.</p> <p>It should be noted that flooding can occur from private sewers and drains which are not the responsibility of United Utilities Ltd. This report excludes flooding from private sewers and drains and United Utilities Ltd makes no comment upon this matter.</p>
-------------	--

Question 2.9 Please state the distance from the property to the nearest boundary of the nearest sewage treatment works

The nearest sewage treatment works is 0.06km to the North North East. The name of the nearest sewage treatment works is Upton.

Informative	The nearest sewage treatment works will not always be the sewage treatment works serving the catchment within which the property is situated. It should be noted that there may be a private sewage treatment works closer than the one detailed above that have not been identified.
-------------	---

Question 3.1 Is the property connected to mains water supply?

Records indicate that the property is connected to mains water supply.

Informative	United Utilities Ltd does not keep details of private supplies. The situation should be checked with the current owner of the property.
-------------	---

Question 3.2 Are there any water mains, resource mains or discharge pipes within the boundaries of the property?

The map of the waterworks does not indicate any water mains, resource mains or discharge pipes within the boundaries of the property.

Informative	The boundary of the property has been determined by reference to the plan supplied. Where a plan was not supplied the Ordnance Survey Record was used. The presence of a public water main within the boundary of the property may restrict further development within it. United Utilities Ltd have a statutory right of access to carry out work on their assets, subject to notice. This may result in employees of United Utilities Ltd, or its contractors, needing to enter the property to carry out work.
-------------	---

Question 3.3 Is any water main or service pipe serving or which is proposed to serve the property the subject of an existing adoption agreement or an application for such an agreement?

Records confirm that water mains or service pipes serving the property are not the subject of an existing adoption agreement or an application for such an agreement.

Informative	This enquiry is of interest to purchasers of new homes who will want to know whether or not the property will be linked to the mains water supply.
-------------	--

Question 3.4 Is the property at risk of receiving low water pressure or flow?

United Utilities have confirmed they do not hold a record of any properties being at risk of receiving low water pressure or flow within their supply area. For further information it is recommended that enquiries are made of the vendor.

Informative	"Low water pressure" means water pressure below the regulatory reference level which is the minimum pressure when demand on the system is not abnormal. United Utilities Ltd report properties receiving pressure below the reference level, provided that allowable exclusions do not apply (i.e., events which can cause pressure to temporarily fall below the reference level). Reference level: The reference level of service is a flow of 9l/min at a pressure of 10m head on the customer's side of the main stop tap (MST). The reference level applies to a single property. The reference level of service must be applied on the customer's side of a meter or any other United Utilities Ltd fittings that are on the customer's side of the main stop tap. Where a common service pipe serves more than one property, the flow assumed in the reference level must be appropriately increased to take account of the total number of properties served. Surrogate for the reference level: Because of the difficulty in measuring pressure and flow at the MST, United Utilities Ltd may measure against a surrogate reference level. United Utilities Ltd should use a surrogate of 15m head in the adjacent distribution main unless a different level can be shown to be suitable. In some circumstances United Utilities Ltd may need to use a surrogate pressure greater than 15m to ensure that the reference level is supplied at the customer's side of the MST (for example in areas with small diameter or shared communication pipes). There are a number of circumstances under which properties identified as receiving low pressure should be excluded from the reported figure. The aim of these exclusions is to exclude properties which receive a low pressure as a result of a one-off event and which, under normal circumstances (including normal peaks in demand), will not receive pressure or flow below the reference level. United Utilities Ltd must maintain verifiable, auditable records of all the exclusions that they apply in order to confirm the accuracy and validity of their information. Allowable exclusions includes Abnormal demand, Planned maintenance, One-off incidents, Low pressure incidents of short duration and common supply.'
-------------	---

Question 3.5 What is the classification of the water supply for the property?

The water supplied to this property has an average water hardness of 104.00 CaCO₃mg/l (Slightly Hard)

Informative	The hardness of water depends on the amount of calcium in it - the more it contains, the harder the water is. There is no UK or European standard set for the hardness of drinking water. More information on water hardness can be found on the Drinking Water Inspectorates' website: http://www.dwi.gov.uk Water hardness can be expressed in various indices for example the hardness settings for dishwashers are commonly expressed in Clark's degrees, but check with the manufacturer as there are also other units.
-------------	---

Question 3.6 Please include details of the location of any water meter serving the property.

Records indicate that the property is not served by a water meter.

Informative	Where a meter does not serve the property and the customer wishes to consider this method of charging, they should contact United Utilities Ltd.
